

Learning Beliefs: Student

1. I learn best when I am taught through exploration and inquiry. This allows me to be curious and discover what is important to me.
2. My learning should be about things that are important or relevant to me.
3. I learn best about things that I feel strongly about.
4. I will learn to think critically about things and be flexible in my thinking.
5. Learning should be focused on me, and not the teacher. My learning space is the centre of my learning.
6. I will be mindful of how my decisions affect the environment and those around me.
7. I will see learning as not just getting a grade but rather as a process that teaches me skills I can use to be successful in whatever I pursue.
8. Learning in the Explozone will allow me to work with others cooperatively in a team environment.
9. My teacher will be a co-learner with me, and be there to support, challenge, and guide me in my own learning.
10. I will see my own learning as a process that allows me to see where I can improve, and where I am already succeeding.
